* denote significant difference of $P < 0.05$ using two-tailed t-test assuming equal variance.

Plus – minus values are means ± SD. WM – Data from weight matched mice (n = 6). †

Normalized values – measures divided by BW, LW or TLC. Abbreviations: BW – body weight, LW – lung weight, IVC - inspiratory vital capacity, FVC – forced vital capacity, FEV₇₅ - forced expiratory volume in 75 milliseconds.
